INTERVIEWMATE AI

AI-powered voice-based interview preparation platform | One-page solution pitch

Live project: https://interviewmate-ai-r0c9.onrender.com/

THE PROBLEM

Many students understand technical concepts but struggle to explain their knowledge clearly and confidently in interviews. Access to repeated mock interviews and actionable feedback can be limited, making it difficult to identify weaknesses and improve.

THE SOLUTION

InterviewMate AI is a browser-based practice platform designed to help learners rehearse technical, HR, and behavioural interview questions through voice-based interaction. It combines question practice, speech transcription, structured answer evaluation, and feedback in one workflow.

HOW IT WORKS

1. Choose	Select a category such as Python, DSA, DBMS, HR, or Behavioural, and choose a language.
2. Practise	Start a session, view the interview question, and record an answer using the microphone.
3. Transcribe	The voice workflow sends recorded audio to a speech-to-text service to produce a transcript.
4. Review	Review scores for technical correctness, relevance, completeness, clarity, and communication, plus strengths, weaknesses, practical suggestions, and an improved sample answer.
5. Track	View previous practice sessions and saved results in the interview history.

TECHNOLOGY

Backend: Python, FastAPI | **Frontend:** HTML, CSS, JavaScript
Database: SQLite, SQLAlchemy | **Voice services:** Gnani AI speech technology

VALUE & FUTURE SCOPE

The project aims to help students practise consistently, recognise gaps in their answers, and strengthen interview communication. Planned enhancements include stronger semantic evaluation, more question categories and languages, and personalised progress tracking.
